Install Intersection Warning Signs

Standard traffic sign used to indicate the presence of an intersection ahead.

Targeted Crash Types
- Right-angle
- Rear-end (major road)

Conditions Addressed
- Poor visibility of the intersection from approaches.
- Crash history or observed conflicts involving lack of awareness of intersection or traffic control.
- Observed speeding on approaches to the intersection.

Problems Addressed
- Inadequate visibility of intersection or intersection traffic control devices
- Speeding

Considerations
- Intersection Warning (W2-1 through W2-8) signs may be supplemented with an Advisory Speed (W13-1P) plaque.
- Other than the Circular Intersection (W2-6) sign and the T Symbol (W2-4) sign, Intersection Warning signs should not be used on approaches controlled by STOP (R1-1) signs, YIELD (R1-2) signs, or traffic signals.
- No more than two side road symbols should be displayed on the same side of the highway on an Offset Side Roads (W2-7) or Double Side Roads (W2-8) sign, and no more than three side road symbols should be displayed on a W2-7 or W2-8 sign.
- A Two-Direction Large Arrow (W1-7) sign may be used on the far side of a T-intersection in line with, and at approximately a right angle to, traffic approaching from the stem of the T-intersection. The W1-7 sign may be used with or without intersection traffic control signs.
- For intersections occurring within or immediately adjacent to horizontal curves, the Cross Road (W2-1) sign or Side Road (W2-2 or W2-3) sign may be combined with the Turn (W1-1) sign or Curve (W1-2) sign to create a combination Horizontal Alignment/Intersection sign (W1-10 series).
- The relative importance of the intersecting roadways may be shown by different widths of lines in the symbol.
